Abstract (Basic): DE 4105948 A

The electronic circuitry is inserted into a container (16) with plug connector parts for connection with counter connectors. At least two opposingly connected pivotable levers (6) are provided with a gripper arm (7) acting on the container (16).

Each lever (6) is fastened down by engagement of a spring loaded means in a recess (11) of the lever (6). This spring loaded means may be a U-shaped sprung wire (10) connected to the front panel (1) of the circuitry construction. When the circuitry is inserted the spring (10) is driven along a slope (14) of the lever (6) to the recess (11).

ADVANTAGE - Is held in container as securely as possible using as few parts as possible. Connector is simple and inexpensive to make and does not require additional means for its operation.
